## Product Description

### Free Sample Red Pomegranate Fragrance Oil For Body Perfume Making Flavour and Fragrance

Product Code: LDZ-PL11608

Pure Red Pomegranate fragrance oils are high-performance, professional-grade concentrates designed for luxury perfumery. Known for their vibrant "ruby-red" olfactory profile, these oils provide a sophisticated balance of tart fruitiness and deep, resinous undertones, making them a popular choice for both niche and mass-market perfume production.

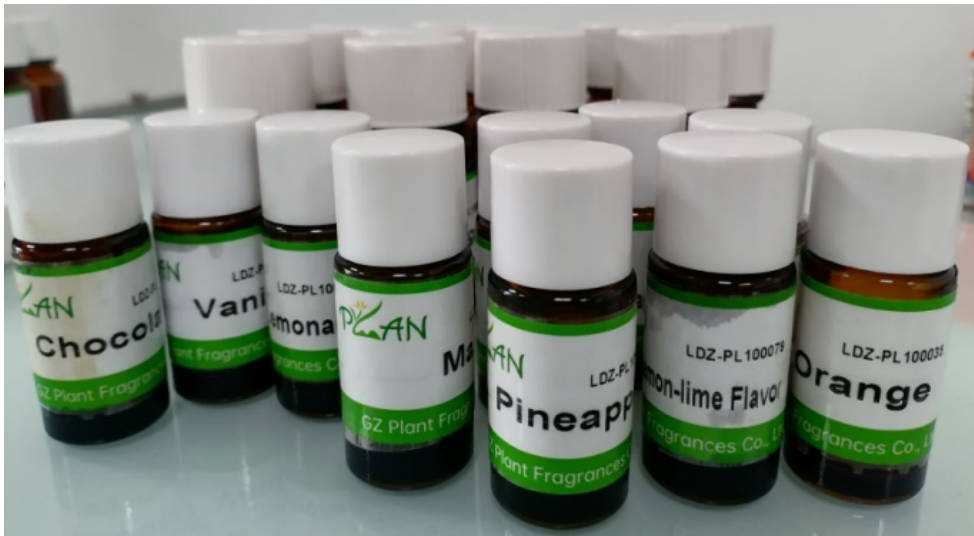

### Fragrance Profile

The profile is defined by a warm, "smoky-sweet" foundation. It typically utilizes Santalum album (Sandalwood), Musk, and Onycha (Dufra), which is often smoke-cured to provide a unique leathery undertone.

Due to their alcohol-free nature, these oils act as high-performance fixatives. They possess low volatility, allowing the fragrance to linger on the skin for over 24 hours, evolving into a personal "skin-scent" that reacts to body heat.

Base Notes	Heart Notes	Top Notes
------------	-------------	-----------

Sandalwood, Musk, and Amber, often matured for months to achieve a "macerated" depth.	Spices like Clove, Cinnamon, and Mahlab seeds, which impart a characteristic warmth.	Traditional Sudanese variants may include subtle infusions of Jasmine or Frankincense.

#### Technical Specifications:

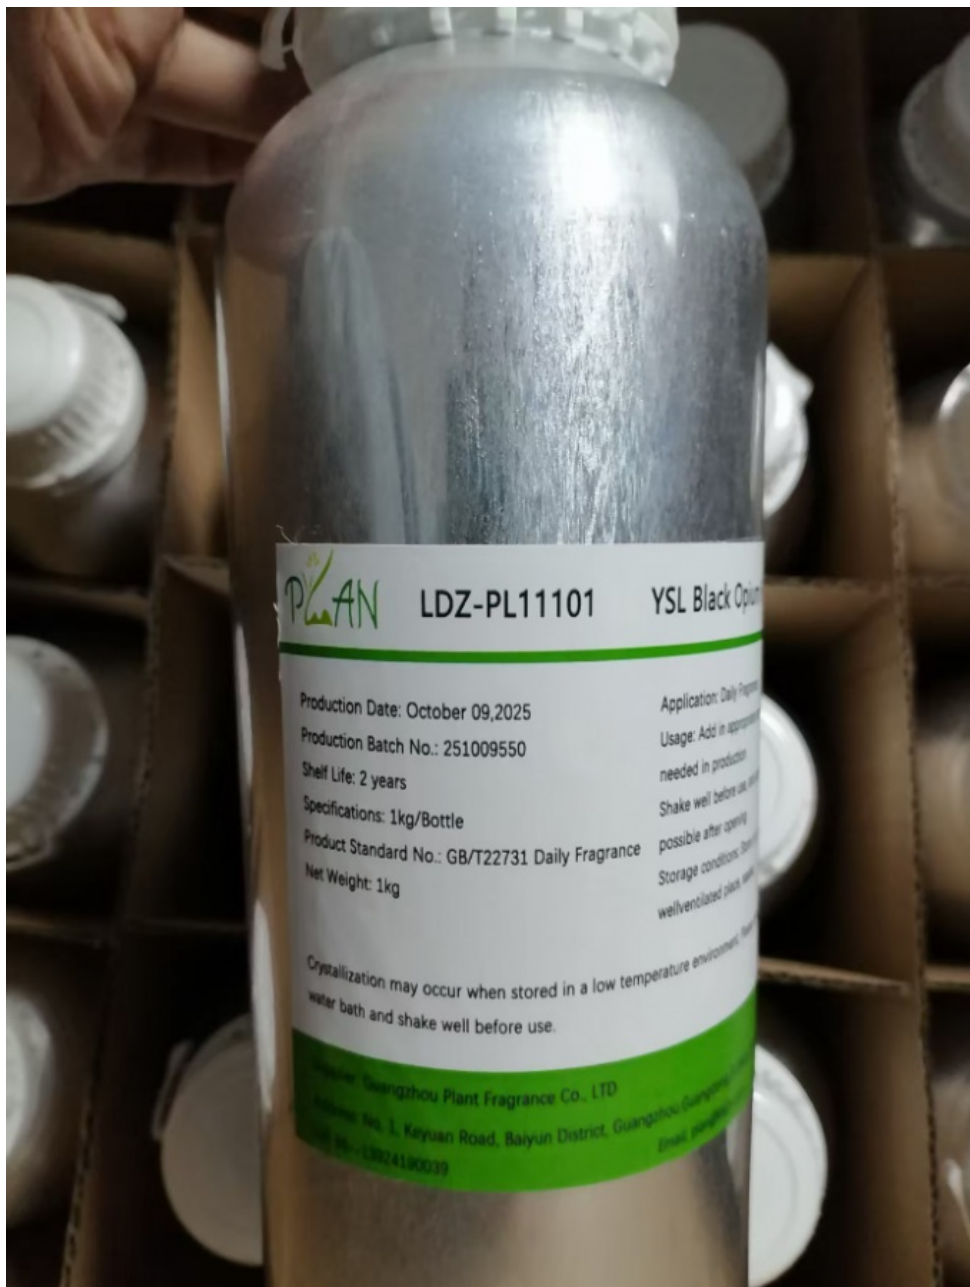

For professional manufacturing, batch consistency is maintained through rigorous physical and chemical standards. The oil is typically non-discoloring in alcohol-based formulations and possesses a high flash point, ensuring safety during high-heat mixing or bulk transport.

Parameter	Specification

**Applications & Functions:**

Pure Red Pomegranate fragrance oils are high-performance concentrates prized for their vibrant, "ruby-red" olfactory profile. In professional perfumery, these oils are utilized for their versatile ability to bridge the gap between fresh-fruity top notes and deep, sensual base accords.

Primary Applications	Description
Fine Fragrance Production	These oils serve as a central mid-to-top note in Eau de Parfum (EDP) and Extrait de Parfum formulations. They are typically dosed at 15%–20% for EDPs to provide a long-lasting, sophisticated fruitiness that pairs well with musks, amber, and floral notes like rose or lotus.
Body Care Infusions	Due to their skin-safe nature, they are frequently integrated into luxury body oils and lotions. A standard dosage of 2%–5% ensures a refreshing, uplifting scent without causing irritation.
Artisanal Blending	Professional perfumers use pomegranate oil to add a "tart-sweet" complexity to oriental or woody blends. It acts as a natural enhancer for spice notes like pink pepper or frankincense, creating "Noir" style fragrances that are popular in niche markets.

**Usage Summary:**

Application Type	Recommended Dosage	Performance Profile
Fine Perfume	15% – 25%	High projection; 8+ hour longevity
Body Oil/Butter	2% – 5%	Gentle "skin-scent" intimate wear
Home/Car Scent	10% – 25%	Vibrant diffusion; clean finish
